Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections under 35 U.S.C. 103(a)

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-13,16 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 02262519; 1025/90 and Monaghan et al (WO 9857972; 12/23/98).

JP '519 discloses an agent comprising a prostaglandin I₂ derivative as an ammonium salt. JP '519 teaches that the composition is used to treat nerve conditions associated with diabetes. See abstract. JP '519 does not teach the composition comprising an ammonium compound, the instant ratio, specific ammonium compounds and specific PG I₂ compound. However, Monaghan teaches a composition comprising an ammonium compound. Monaghan teaches that the composition is used to treat nerve conditions associated with diabetes. It would have been obvious to one having ordinary skill in the art to combine the prior art compositions. One would have been motivated to do this since both prior art inventions individually teach compositions used to treat nerve disorders associated with diabetes. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the agent comprising the instant ammonium and PGI₂ compounds. One would have been motivated to do this because all ammonium compounds and PGI₂ compounds would have similar structure and similar activity.

Art Unit: 1616

The optimal ratio of ionic compound to PGI2 compound would have been determined through routine experimentation.

Claim Objection

Claims 14,15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Telephonic Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alton Pryor whose telephone number is (703) 308-4691. The examiner can normally be reached on Monday through Friday from 8:00 a.m. to 4:30 p.m.
